3) Reasons for Recall:

The above listed products were marketed without an approved New Drug Application or a Generic Drug Application (ANDA). Products number 24, 25, and 63 were recalled due to the firm’s withdrawal of the product from the market. The remaining 62 products listed above were marketed as a dietary supplement. However, the products were found to contain steroid or steroid-like substances, making them unapproved new drugs. Steroid-containing products present a risk of acute liver injury to product users. In addition, steroids may cause other serious long-term adverse health consequences in men, women, and children. These include shrinkage of the testes and male infertility, masculinization of women, breast enlargement in males, short stature in children, a higher predilection to misuse other drugs and alcohol, adverse effects on blood lipid levels, and increased risk of heart attack, stroke, and death.

4) Names of Consignees:

The distribution of these products is via the internet to a large number of consignees. On November 20, 2009, the firm sent an e-mail to consignees providing a list of affected products. Specific names of foreign consignees are unknown at this time.

5) Link to FDA or Firm Press Release:

Our investigation is still on-going, and we will continue to update you and the public as further data and other information becomes available. Please feel free to contact me in the interim if you have any questions, or if I may be of assistance.
